POWERCLAMP™

The rugged Amulet PowerClamp substantially increases an excavator's versatility. Like the thumb on your hand, the PowerClamp allows the excavator to grasp objects, making it an indispensable tool for demolition, land clearing, scrap handling, as well as log or debris loading.

Amulet excavator PowerClamp features:

- **Heavy gussets & reinforcements** where needed.
- **Serrated teeth with webbing** provide positive gripping action.
- **Large diameter hardened pins & bushings** throughout.
- Clamp retracts close to the dipper when not needed.
- Cushioned Hydraulic cylinders with **extra heavy duty rods**.
- Full one year warranty.
- Excavators weighing greater than 20K lbs:
 - Clamps have a **full meshing tooth bar**.
 - **Tooth bar design** offers wider / narrower tooth arrangement.
- PowerClamps also available for loader/backhoes or excavators weighing under 20K lbs..

Clamp Styles:

- **Linkage style** - the progressive linkage between the cylinder and clamp gives the PowerClamp more complete rotation. Approximately 180°. Available for machines with or without coupler.
- **Non-linkage style** - the hydraulic cylinder is pinned directly to the clamp. Rotation is approximately 140°. Available for machines with or without coupler.
